

MERS Workshop - CASE STUDY: REAL-LIFE PROJECT ASSESSMENT

Instructions

You have chosen to address an existing project that you know well.

You are now asked to review the program activity/approach your organization (direct implementation or facilitated approaches) and explore the relevant MERS standards, actions, indicators and guidance notes.

- Keep in mind lessons learned from previous crises and work you have done in this project.
- Be as specific and contextual as you can.
- Use this to really think about your project and how it could be improved and brought in-line with the standards
- There are possibly places where they were well applied, what are they?

Feel free to use any method for presenting your retrospective assessment of the MERS against the real-life example that you have chosen.

Issue/Concern	Activity or Action(s) to be taken	Standard(s) that apply
